Impact of the Redesign

Tested with 21 participants and 6 older adults

100%	**task completion across tested core flows** Redesigned banking tasks were completed successfully in the usability study.
4.4–4.7/5	**user satisfaction across redesigned flows** Participants rated the core banking tasks positively after the redesign.
67%	**of participants found personalized tags useful** Saved actions helped users return to frequently used banking services.
<10 sec	**to check an account balance** Reduced from around 30 seconds in the original flow.

Introduction

This **self-initiated UX project** began with a **usability study of the YONO SBI mobile banking app.** We **tested it with six users** representing different banking backgrounds and levels of digital confidence. Their difficulties with finding everyday actions, understanding transfer options, and confirming payments informed our redesign.

We explored a simplified homepage, personalised action tags, clearer transfer flows, budgeting and spending insights, visual currency cues, improved recent activity and duplicate payment warnings. We tested the redesigned flows and **evaluated the new features with 15 additional users.**

Key Pain Points Identified During Usability Testing

01 Cluttered Homepage
Too many services made key banking actions difficult to identify.

02 One Homepage for Different Needs
First-time, regular and elderly users had different priorities but saw the same homepage.

03 Frequent Tasks Were Hard to Access
Checking balances, sending money and paying bills required repeated navigation.

04 Confusing Transfer Options
Users struggled to distinguish UPI, Quick Transfer and Fund Transfer.

05 Cooling Period Message Went Unnoticed
Most users missed the cooling period notice while adding a new payee.

06 Elderly people faced problem while sending money
Elderly users struggled to follow transfers and confirm whether money was received.

Design Solutions

01
Adding Tags to Save Frequent Banking Tasks
Enabled users to tag and save their most-used services for quicker access.

02
Personalizing the Homepage Around Frequent Actions
Prioritized saved services, account balance and actions users need immediately.

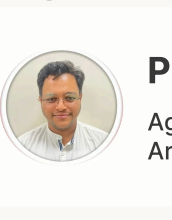
03
Adding a Recent Activity Section
Surfaced recent transactions, including money received and sent, in one place.

04
Introducing Visual Money Cues for Elderly Users
Used recognizable currency visuals to clarify money movement during transfers.

05
Distinguishing Transfer Methods Through Clearer Labels
Clarified UPI, Quick Transfer and Fund Transfer to guide users to the right method.

06
Making Payment Status and Duplicate Risks Visible
Added clearer confirmations and duplicate-transfer warnings to reduce uncertainty.

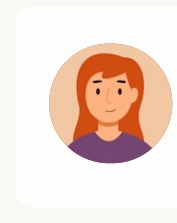
Who we tested

01 Regular User Of Yono


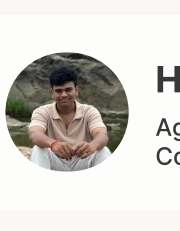
Prathmesh Waliokar
Age 35-40,
Architect and Professor

02 Account Holder (Non-YONO User)

Rajat Akre
Age 35-40,
Professor + UI/UX Designer

03 First time User Of Yono


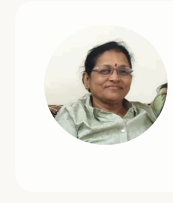
Sheela Patil
Age 45-50,
Housewife

04 Non-SBI User


Hemchand Pavnikar
Age 21
College student

05 Occasional User

Ranjana Satpute
Age 40-50,
Housewife

06 Senior User


Rekha Ghorse
Age 60+,
Housewife

Task tested

01 View balance & transactions
TASK COMPLETION: 100%
AVERAGE TIME: 30 sec
ERROR RATE: 10–20%
KEY ISSUES OBSERVED
- Balance not immediately visible
- Eye icon unclear
- New users relied on scanning

02 Add a new payee
TASK COMPLETION: 85%
AVERAGE TIME: 1 min
ERROR RATE: 40–50%
KEY ISSUES OBSERVED
- Confusion between UPI, Quick Transfer and Fund Transfer
- Wrong option selection
- Unnecessary exploration to find the right flow

03 Transfer money to payee
TASK COMPLETION: 65%
AVERAGE TIME: 2–3 min
ERROR RATE: 55%
KEY ISSUES OBSERVED
- Input errors during details entry
- Unclear terminology
- App-switching for OTP/verification
- Uncertainty after adding a payee

What Users Told Us

REGULAR USER
"I want to find the few things I use every day without searching."

YOUNG DIGITAL USER
"I want to understand where my money is going, not just send it."

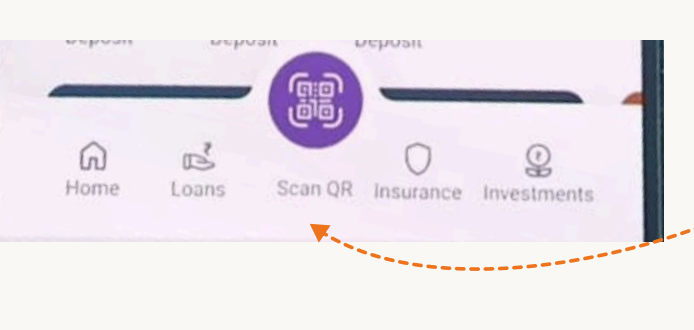
SENIOR USER
"I need to know if my money reached the right person."

Needs Across User Groups

USER GROUP	PRIORITIES	GAP / OPPORTUNITY
Regular	Balance, repeat transfer, bills, alerts	Frequent tasks buried
SBI user new to YONO	Balance, transfers, transaction history	Unfamiliar paths and labels
First-time	Recharge, guidance, clear actions	Steep learning curve
Young digital	Budget, spending alerts, rewards	Limited spending awareness
Occasional	Balance, bill payment, recent history	Difficult to relearn navigation
Senior	Transfers, incoming money, pension visibility*	Uncertain status and confusing entry

Why We Grouped Banking Services and Added Recent Activity to the Navigation

Before

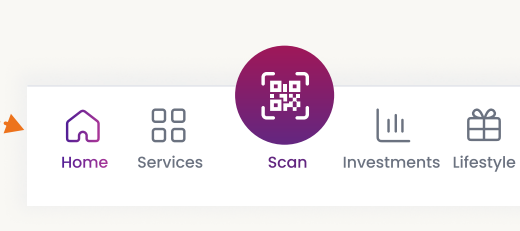


Home
Loans
Scan QR
Insurance
Investments

Repeated Services Cluttered the Homepage
Loans, Insurance and Investments appeared on both the homepage and navigation bar, creating clutter.

Iteration 01

Grouping Banking Services Under One Tab
Design decision:
- Grouped banking features under Services.
- Retained Investments as research showed its importance.



Home
Services
Scan
Investments

history
all services
Profile

Introducing a History Tab
Design decision:
Banking involves repeated actions and verification, so we added History for quick access to recent transactions and services.

What didn't work:
Users assumed History showed only past transactions.

Final Nav bar

Renaming History to Recent Activity
Final design decision:
- Users assumed History showed only past transactions, while the section also included recently used services.
- Renamed it Recent Activity to clearly reflect both.

Too Many Services Made Send Money Difficult to Find
- Cluttered homepage hid key actions.
- Multiple transfer options slowed users down.

Iteration 01

Grouping Transfer Methods Under One Send Money Action
Design decision:
- Combined transfer methods under one Send Money option.

What didn't work:
- Scan, Send Money and M-Cash lacked visual emphasis.

Final screen

Highlighting Quick Actions and Adding Detailed Loan Summaries
Interview insight:
- Users wanted more loan details than the original summary provided.

Design decisions:
- Highlighted key actions for faster discovery.
- Added loan balance, amount paid and repayment progress.

Bringing Recent Banking Activities Together
Interview insight:
- Users wanted more loan details than the original summary provided.

Design decisions:
- Highlighted key actions for faster discovery.
- Added loan balance, amount paid and repayment progress.

Final screen

Surfacing Recent Payments Upfront
Usability insight:
Some less tech savvy users wanted to see latest payment immediately.

design decision:
Added a prominent payment card at the top for quicker verification, without scrolling

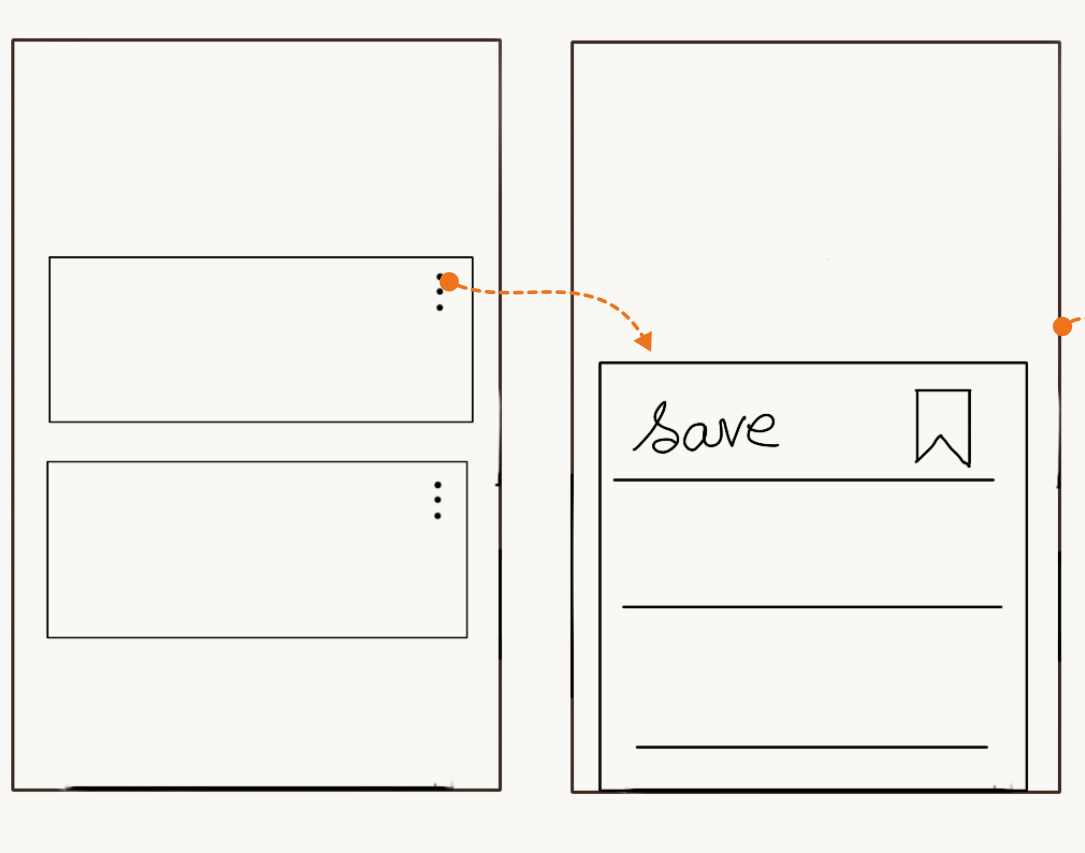
We Introduced Personalized Tags to Reduce Repeated Navigation for Frequent Banking Tasks

THE IDEA
Inspired by YouTube's Save to Playlist, we introduced Tags.

Users can save frequent tasks from recharges, bill payments and transfers to investments, insurance, loan repayments and account services under personal tags such as Family, Monthly Bills or Savings.

Saved tasks appear on the homepage for faster access, reducing repeated navigation.

Iteration 01



Adding Tags to the Three-Dot Menu
Design decision: Placed the "Save to Tag" option inside the three-dot menu.

Our assumption: We assumed users might overlook the feature because it was hidden within the menu.

Final screens

Making Tags Visible with a Save Icon
Design decision: Introduced a bookmark-style icon, inspired by familiar Instagram and YouTube interactions, allowing users to save services directly into tags.

Quick Access to Saved Services on the Homepage
Saved services appear on the homepage under personalized lists like Home Services and Family Services.

OVERALL IMPACT

75–80%

Fewer Navigation Steps
Before: Frequent tasks took 4–5 clicks and 1–5 minutes.
After: Personalized tags reduced access to 1 click and ~10 seconds.

67%

found tags helpful, mainly users comfortable with technology.
Less tech-comfortable users struggled to understand the feature.

Using Familiar Currency Note Visuals to Build Confidence in Digital Transfers for Elderly Users

Usability Insight: Existing UPI Flow
Testing revealed that elderly users struggled with digital transfers, as their mental model was shaped by handling physical cash.

Iteration 01

OVERALL IMPACT

80%

Fewer Incorrect Taps
Before: 4–5 incorrect taps, confusing buttons, and uncertainty about payment success.
After: Guided amount entry and clear confirmations reduced confusion and improved reassurance.

Remaining friction: typing the amount was still difficult for some users.
